

Wrist Size Guide

Measure first / Choose your own proportions

Before you begin / print at 100%

Print on US Letter or A4 at 100% / Actual size. Turn OFF Fit to page and Shrink oversized pages. Verify the line below with a physical ruler. If it is not exactly 50 mm, stop and correct your print settings.

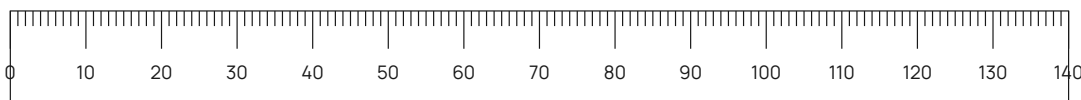

50 mm calibration line — measure between end marks

01 / Measure your wrist

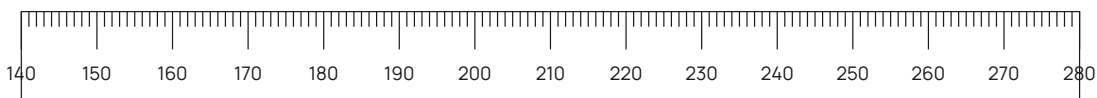

Wrap a flexible tape around your wrist where you wear your watch, just behind the wrist bone. Keep it snug, not tight. Record the circumference in millimeters without adding a comfort allowance. Repeat three times. Paper works too: mark the overlap, flatten it and measure with a ruler.

02 / Printable wrist strip

Cut the two strips. Join at the 140 mm lines with tape, aligning the lines exactly and keeping the paper straight. Part B continues Part A; do not leave a gap. Wrap the strip around your wrist and read where the 0 mm edge meets the scale.

START / 0 mm

PART B / align 140 mm with the end of Part A

Tape the join on the back. Keep the printed scale visible. Record your actual wrist size and tell client care whether you prefer a close or relaxed fit.

Your watch, your proportions

Case size / Bracelet and strap fit

03 / A case-size starting point

Wrist circumference	Case diameter	Character
140–152 mm / 5.5–6.0 in	34–36 mm	Refined, compact proportions
153–165 mm / 6.0–6.5 in	36–38 mm	Classic everyday balance
166–178 mm / 6.5–7.0 in	38–40 mm	Versatile everyday or sport
179–191 mm / 7.0–7.5 in	40–42 mm	A stronger sport presence
192–203 mm / 7.5–8.0 in	42–44 mm	Bold, generous proportions
204 mm+ / 8.0 in+	44–46 mm+	Oversized, if the lugs fit

Suggestions, not rules. Case diameter excludes the crown. Smaller or larger cases may suit your taste; prioritize lug-to-lug fit, shape, thickness and comfort. Outside these ranges, ask for individual guidance.

Lug-to-lug matters

Measure between the tips of the upper and lower lugs. Lugs should stay within the flat top of your wrist without overhang. Curved lugs, end links and case thickness affect fit.

Bracelet links

Check the listing's bracelet length and included spare links. Removable links and clasp micro-adjustment vary by model; extra links may need to be sourced. Keep the bracelet secure without pinching.

Straps and buckles

Check lug width as well as strap length. Leave adjustment in both directions and a modest tail through the keeper. Leather, rubber and deployant clasps fit differently.

A fit made for you

LuxyVerse sizes bracelets on request. Share your wrist circumference and preferred fit with client care before dispatch; sizing options depend on the individual watch.
